Installing Octave on GNU/Linux

Installing Octave on GNU/Linux

We recommend using your system package manager to install Octave.

On Ubuntu, you can use:

- *sudo apt-get update && sudo apt-get install octave*

On Fedora, you can use:

- *sudo yum install octave-forge*

Please consult the Octave maintainer's instructions for other GNU/Linux systems.

"**Warning:** Do not install Octave 4.0.0"; checkout the "Resources" menu's section of "Installation Issues".
